

The Student Center

Introduction

This guide explains how students use PowerAlgebra.com and PowerGeometry.com for Florida, and it shows the organization of the Student Center Home page. It also discusses assignments as well as how students view lesson progress and test results.

Before We Begin

To begin, students go to PowerAlgebra.com or PowerGeometry.com and click **Pearson SuccessNet**.

Sign In

Next, they type in their user name and password. To learn how to create student accounts, watch the SuccessNet Add Students tutorial on this Web site.

Home Page

When students log in, they will see the Student Center Home page.

From the Book Case, students can access the online student edition. They can also download various Student Resources, such as the My Math Videos and animated problems.

Messages posted for students appear in the Notices area. Teachers can use the Notices feature to explain an assignment or provide instructions.

The Research Center provides access to a variety of resources, such as a dictionary, an atlas, and an encyclopedia. Students can search all resources by typing a keyword into the text box below Look it up! and clicking **Go**.

In Explore, students can view all of the online lessons for the entire course from the Table of Contents. Students also have access to a Search feature, where they can search for lesson activities by keyword or media type.

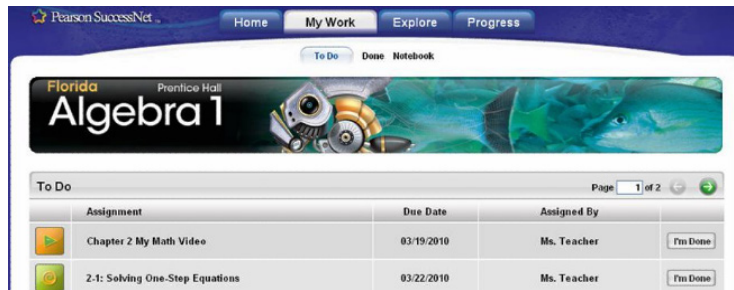

To Do displays a list of assignments that includes lessons, tests, and remediation activities. From this area, students also have access to their completed assignments and a digital notebook.

My Work Tab

To begin working on assignments, students click **To Do**.

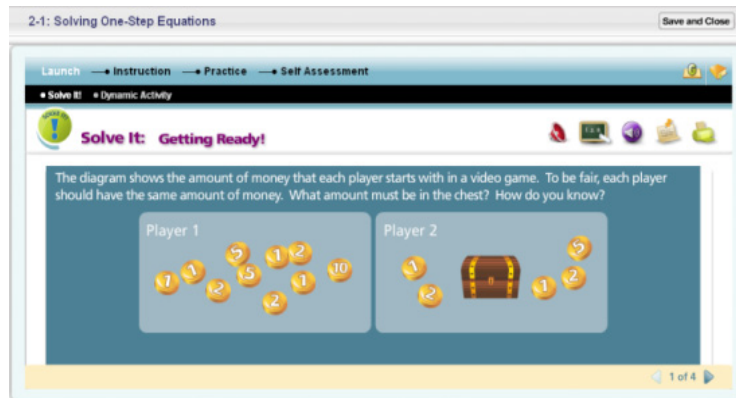

To Do List

The next screen displays additional tabs. The My Work tab displays a list of assignments. Students can click a title to begin an assignment.

Lessons

There are four parts to each online lesson. *Launch* includes the My Math Video and Dynamic Activities. *Instruction* includes animated guided practice problems. Sometimes there are additional alternative problems that don't appear in the textbook.

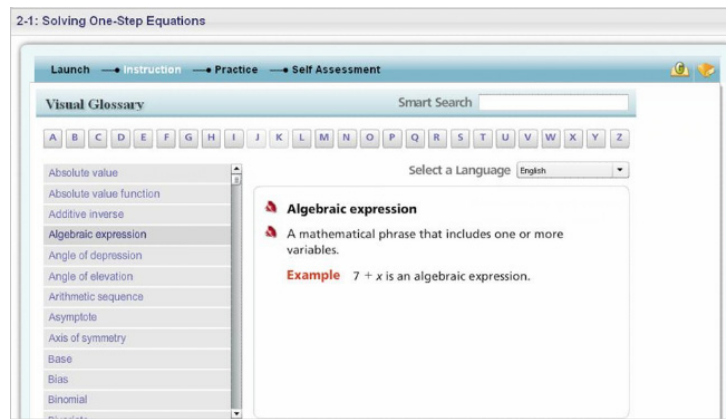

Practice includes the same problems that appear in the textbook. Students can check their understanding by using the *Self Assessment*.

To learn more about the online lessons, watch the Teacher Center tutorial on this Web site.

Lesson Tools and Features

Various tools and features are available during some of the lesson activities. Students can access the Visual Glossary and the online Student Edition. They can also turn the audio on or off and read lesson instructions. The lesson vocabulary appears in print and includes audio as well. Finally, students can also review key math concepts and print the screen.

Assessments

Students can complete assessments online. Tests are immediately scored and students receive instant feedback. Based on test results, remediation activities are automatically assigned.

Done

Students click **I'm Done** once they finish a lesson. The lesson then disappears from the To Do list and appears on their list of completed assignments.

Notebook

Students can use the Notebook feature to store notes about each part of a lesson. They can also print out a compiled list of notes for each chapter.

Explore

Students can explore all of the online lessons from the Table of Contents. The Search feature allows students to look for activities and lessons by keyword or media type.

Progress

In Progress, students can view both lesson progress and test results.

Review

This guide explained how students use PowerAlgebra.com and PowerGeometry.com for Florida. It showed the organization of the Student Center Home Page and discussed how students view lesson progress, assignments, and test results.
